this book offers a systematic treatment the first in book form of the development and use of cohomological induction to construct unitary representations george mackey introduced induction in 1950 as a real analysis construction for passing from a unitary representation of a closed subgroup of a locally compact group to a unitary representation of the whole group later a parallel construction using complex analysis and its associated co homology theories grew up as a result of work by borel weil harish chandra bott langlands kostant and schmid cohomological induction introduced by zuckerman is an algebraic analog that is technically more manageable than the complex analysis construction and leads to a large repertory of irreducible unitary representations of reductive lie groups the book which is accessible to students beyond the first year of graduate school will interest mathematicians and physicists who want to learn about and take advantage of the algebraic side of the representation theory of lie groups cohomological induction and unitary representations develops the necessary background in representation theory and includes an introductory chapter of motivation a thorough treatment of the translation principle and four appendices on algebra and analysis

in this classic work anthony w knapp offers a survey of representation theory of semisimple lie groups in a way that reflects the spirit of the subject and corresponds to the natural learning process this book is a model of exposition and an invaluable resource for both graduate students and researchers although theorems are always stated precisely many illustrative examples or classes of examples are given to support this unique approach the author includes for the reader a useful 300 item bibliography and an extensive section of notes
